INTRODUCTION

The development of the Saudi Billing System (SBS) has been a crucial initiative focused on improving the efficiency and accuracy of healthcare data management in Saudi Arabia. This initiative was driven by the need to align the SBS with DRG (Diagnosis-Related Groups) and other bundling systems, ensuring a cohesive and modern healthcare coding framework. The revision of Version 2 brought significant enhancements to the SBS maintenance framework, aligning it with international best practices and making it more adaptable to the changing needs of healthcare providers and systems.

A comprehensive governance framework and policy were established to maintain and update the SBS in harmony with DRG and other bundling systems. Additionally, a tabular list was developed to support this synchronization. The maintenance strategy was further refined to effectively address clinical and financial inconsistencies. SBS codes were mapped to relevant international terminologies and classifications, such as SNOMED CT and ACHI, ensuring interoperability with Electronic Health Records (EHRs) and other applications.

Specifications for the *Saudi Billing System* (SBS) are:

1. *Saudi Billing System* (SBS) published as the SBS Tabular List and the SBS Alphabetic Index in tandem with ACHI Standards and Saudi Coding Standards.
2. SBS classifies interventions performed in public and private hospitals, day centers, and ambulatory settings. Allied health interventions, dental services, and other interventions performed outside the operating theatre are also included.
3. The structure of the intervention classification is based on anatomy rather than surgical specialty. Chapters closely follow the chapter headings of the WHO ICD-10 to maintain parity with the disease classification.
4. Nonsurgical procedures are listed separately from the surgical procedures, whenever feasible.
5. The interventions in SBS are provider-neutral. That is, the same code should be assigned for a specific intervention regardless of which health professional performs the intervention.
6. An Electronic Code List (ECL) has been produced for implementation of the SBS V3 codes, their descriptions, and basic edits (system rules). This file and instructions for use have been published by CHI for software vendors.

CONTENT SUMMARY

SBS Tabular List: The SBS Tabular List contains the classification of the intervention. Appendices included are:

Appendix A: Clinical Explanation

Appendix B: Billing Instructions

Appendix C: SBS Code List

SBS Alphabetic Index. The SBS Alphabetic Index is used to locate interventional terms for coding. The SBS Alphabetic Index contains many interventional terms that do not appear in the SBS Tabular List.

Australian and Saudi Coding Standards. The Coding Standards contain the standards maintained by CHI, which guide the application of SBS.

CONVENTIONS IN THE SBS TABULAR LIST

FORMAT

First level – anatomical site axis

SBS is structured with a principal axis of anatomical site. Within each chapter the anatomical site is structured by a 'superior' to 'inferior' (head-to-toe) approach.

Second level – procedural type axis

The secondary axis is intervention type, beginning with the least invasive intervention through to the most invasive intervention. Standardised interventional axes are:

Examination

Application, Insertion, Removal Incision

Destruction Excision

Reduction (only applicable in Chapter 15 Procedures on Musculoskeletal chapter)

Repair Reconstruction Revision Reoperation Other procedures

Third level – block axis

SBS is structured on an anatomical basis, therefore code numbers do not always appear in numerical order within the SBS Tabular List. Therefore, a third level axis, called a **block**, is utilised. Blocks are numbered sequentially in the SBS Tabular List to assist users in locating a specific code and have titles that relate specifically to the codes contained within the block.

Certain chapters are an exception to the general format:

- **Chapter 6 Dental services**

This chapter is based on 'The Australian Schedule of Dental Services and Glossary, Twelfth Edition' (Australian Dental Association 2017, *The Australian Schedule of Dental Services and Glossary*, Australian Dental Association, Sydney, [https://www.ada.org.au/Dental-Professionals/Publications/Schedule-and-Glossary/The-Australian-Schedule-of-Dental-Services-and-\(1\)/Australian_Schedule_and_Dental_Glossary_2015_FA2_W](https://www.ada.org.au/Dental-Professionals/Publications/Schedule-and-Glossary/The-Australian-Schedule-of-Dental-Services-and-(1)/Australian_Schedule_and_Dental_Glossary_2015_FA2_W)).

This chapter is structured on a service basis (for example, diagnostic services, preventative services, periodontics, oral surgery). Secondary axes, in most instances, relate to the type of intervention.

- **Chapter 14 Obstetric procedures**

This chapter has a principal axis relating to the pregnancy cycle, for example, antepartum procedures, procedures associated with labour, and delivery. Secondary axes relate to intervention type.

- **Chapter 18 Radiation oncology procedures**

This chapter has a principal axis relating to radiation oncology interventions. Secondary axes relate to the type of radiation (for example, external beam therapy, brachytherapy, computerised planning).

• **Chapter 19 Interventions not elsewhere classified**

This chapter has a principal axis relating to the purpose of the intervention (for example, diagnostic, therapeutic, or administrative/clinical/client support and interventions not elsewhere classified). The secondary axis relates to the type of intervention or the body system. For example, in the primary axis of Diagnostic Interventions, the secondary axes include Assessment, Consultation, Interview, Examination, Evaluation, Diagnostic Tests, Measures, or Investigations – Eye and Adnexa. In the primary axis of Therapeutic Interventions, secondary axes include Counselling, Education, or Nutritional Support Interventions, or Therapeutic Interventions for the Cardiovascular System.

• **Chapter 20 Imaging services**

The principal axis within this chapter relates to the imaging service performed (for example, ultrasound, tomography, radiography). There is no secondary axis within this chapter.

Chapter 21 Laboratory and Pathology

The principal axis within this chapter relates to the laboratory or pathology service performed (for example, ultrasound, tomography, radiography). There is no secondary axis within this chapter.

INCLUSION TERMS

Inclusion terms are the interventional terms listed under a block heading, *Glossary description/definition, or code*.

Their purpose is to demonstrate examples of interventions that are classified to the block or code. They may refer to different interventions, or synonyms, but they are not a subclassification. *Inclusion* terms are listed primarily as a **guide to the content** of the block or code. Many of the items listed relate to important or common terms belonging to the block or code. Others are interventions or sites, listed to distinguish the boundary between one subcategory and another.

Inclusion terms are **not exhaustive**. NEVER code directly from the SBS Tabular List. Reference first the SBS Alphabetic Index, as it contains many more interventional terms than the SBS Tabular List.

EXAMPLE 1:
 90064-01-01 Refractive keratoplasty Keratomileusis
 Thermokeratoplasty

In some instances, it is necessary to read the *Inclusion* terms in conjunction with code titles. This usually occurs when the *Inclusion* terms are lists of sites or pharmaceutical products. Where appropriate, terms from the preceding code or category titles need to be read and understood.

EXAMPLE 2:

1920	Administration of pharmacotherapy
-02-00	Anti-infective agent
	Antibacterial
	Antibiotic Antifungal
	Antiprotozoal Antiviral

In this example, the *Inclusion* terms represent the 'administration of' those agents (e.g. administration of antibacterial agent).

INSTRUCTIONAL NOTES/TERMS

Instructional notes/terms appear in certain locations throughout the ACHI Tabular List:

Chapter Applies to the codes classified to the chapter

First level – Anatomical site axis Applies to the codes classified to the site

Second level – Interventional type axis Applies to the codes classified to the intervention type

Third level – Block axis Applies to the codes grouped under the block heading

Fourth level– Code Applies to the code

Glossary Descriptions/Definitions

Glossary descriptions/definitions are formal statements of the meaning of a term or code. They define the content of a chapter, anatomical site, intervention type, block or code. This instruction is useful in standardising terminology and assisting with classification quality.

The *Glossary descriptions/definitions* are not intended for use by clinical coders.

Includes note

Includes notes further define the content of a chapter, site, intervention type, block or code. They refer to intervention components or equipment used, that is inherent in a code or block.

EXAMPLE 3:

36503-00-00 Kidney transplantation

Includes: vascular anastomosis

In other instances, the Includes instructional note further defines the site.

EXAMPLE 4:

41867-01-00 Reoperation arytenoidectomy

Includes: that by laser

In other instances, the Includes instructional note further defines the site.

EXAMPLE 5:

306 Other procedures on external ear

Includes: auricle external
auditory canal

Note

The *Note* clarifies the use of a code or codes. In some instances, the *Note* provides an example of a diagnostic term for which the intervention may be performed (the *Note* is not exhaustive).

EXAMPLE 6:

39806-00-00 Clipping of intracranial proximal artery ***Note:***
Performed for aneurysm or arteriovenous malformation

The *Note* may also further define certain terms used in code or block descriptions within the block.

EXAMPLE 7:

12 Arterial bypass graft using synthetic material

Note: Synthetic material can include polyester (woven or knitted) or polytetrafluoroethylene [PTFE] grafts

See

The term see is listed within other *Instructional* notes/terms, as a cross-reference to another section of the classification. Follow the cross-references to ensure correct code selection.

EXAMPLE 8:

90011-00-00 Other diagnostic procedures on spinal canal or spinal cord structures

Note: For nonsurgical diagnostic interventions see Chapter 19

EXAMPLE 9:

43801-00-00 Correction of malrotation of intestine
Ladd operation

Excludes: that with resection of intestine — see Alphabetic Index

Code first

The Code first instruction assists with the sequencing of codes. This instruction appears under codes that must never be assigned alone.

EXAMPLE 10:

15012-00-01 Brachytherapy, eye, unilateral

Code first:

- implantation of brachytherapy applicator, 1 eye (42801-00-01) **[177]**

Code also/Code also when performed

These instructions indicate that an additional code is assigned when certain associated interventions are performed or equipment is used.

EXAMPLE 11:

41548-00-01 Obliteration of mastoid cavity, unilateral

Code also when performed:

- meatoplasty, unilateral (41512-00-01) **[305]**

Excludes note

Excludes notes are listed at the chapter, block, and code level. Interventions listed in *Excludes* notes are classified elsewhere in ACHI.

Note: Codes are not listed within the *Excludes* note in numerical order; they are ordered sequentially by block number.

EXAMPLE 12:**8 Intracranial drainage**

Excludes: cerebrospinal fluid shunt (40003 [5], 40000-00, 40012 [19]):

Codes may be listed in *Excludes* notes with or without their extensions (see Example 12; 40003 [5] and 40012 [19]). When the extensions are not listed, the *Excludes* note applies to **all** the four digit extensions of that code (i.e. in Example 12, there are four extensions to code 40012 [19] (see Example 13)

EXAMPLE 13:

40012-00-00 [19]	<i>Endoscopic third ventriculostomy</i>
40012-01-00 [19]	<i>Third ventriculostomy</i>

BLACK REVERSE TEXT BOXES

Black reverse text boxes are used for all block title numbers. They are NOT VALID codes and CANNOT be assigned.

EXAMPLE 14:**1340 Caesarean delivery****TYPE FACE**

Bold Bold type face is used for all block titles in the SBS Tabular List.

Bold, *Italics* Bold and italicised type face is used for Instructional notes/terms:

Includes, Excludes and ***Note***.

Italics Italicised type face is used for Instructional notes/terms: *Code also...*, *Code also when performed*, and *Code first*.

PUNCTUATION**Parentheses ()**

Parentheses are used to enclose:

Excludes: Drainage of Abscess of Prostate (37212-01-00 [1161])

COLON:

A colon is used in *Inclusion* terms and *Excludes* notes, when the terms preceding the colon require one or more modifiers (qualifying terms) for assignment to the code or block.

EXAMPLE 22:

90408-00-00 Destruction procedures on prostate

Includes: Destruction of (Lesion) (Tissue) Prostate:

- Endoscopic (37224-00-00 [1162])
- Percutaneous (90408-02-00 [1162])

In this example, the code classifies endoscopic and percutaneous destruction of lesion of prostate.

Colons are used in *Includes* notes to avoid repetition of terms.

EXAMPLE 23:

90408-00-00 Destruction procedures on prostate

Includes: Destruction of (Lesion) (Tissue) Prostate:

- Endoscopic (37224-00-00 [1162])
- Percutaneous (90408-02-00 [1162])

In this example, the colon is used here to avoid duplication of the terms Destruction of

Colons are also used to separate certain *Instructional* notes/terms (ie *Includes*, *Note*, *Code also/Code first/Code also* when performed, *Excludes*), and the Interventional terms that follow (see Examples 3–12).

NOT OTHERWISE SPECIFIED (NOS)

NOS is an abbreviation for 'not otherwise specified', meaning 'unspecified' or 'unqualified'.

EXAMPLE 24:

90468-06-00 Forceps delivery, unspecified
Forceps delivery NOS.

NOT ELSEWHERE CLASSIFIED (NEC)

The terms 'not elsewhere classified' indicate that certain specified variants of that intervention are classified in other parts of ACHI.

EXAMPLE 25:

43987-02-00 Excision of neuroblastoma, not elsewhere classified

Excludes: intraabdominal neuroblastoma (43987-01-00 [989])
intrathoracic neuroblastoma (43987-00-00 [563])

The abbreviation 'NEC' is used in the ACHI Tabular List in *Inclusion* terms and *Excludes* notes.

NEC code options are only assigned when there is insufficient information to assign the interventional term to a more specific code.

EXAMPLE 26:

90319-04-00 Other closed procedures on liver
Percutaneous procedures on liver NEC
In this example, the code is assigned when there is insufficient information to permit assignment of a more specific percutaneous/closed procedure on the liver.

AND/OR IN CODE TITLES

- The term:
- 'and' in code titles means 'and'
 - 'or' in code titles means 'or'.

EXAMPLE 27:

48224-00-01 [1435] *Bone graft to radius or ulna, unilateral*
47393-00-01 [1431] *Open reduction of fracture of shaft of radius and ulna, unilateral*

GUIDANCE IN THE USE OF SBS

The main aim of clinical coding (clinical classification) is:

To classify clinical concepts into codes.

Clinical concepts in SBS are interventions.

Originally designed to provide access to information contained in clinical records for research, education, and administration, clinical codes are now also utilised to facilitate payment of health services, determine utilisation patterns, and evaluate the appropriateness of health care costs. Coded data also provides the basis for epidemiological studies and research into the quality of health care.

The classification of clinical concepts and/or entities (i.e., an intervention or procedure) into code is a complex activity. Because coded data are used in so many areas, classification must be performed correctly and consistently in order to produce meaningful statistics to aid in the planning of health care needs.

In order to classify accurately, it is essential to have a working knowledge of medical science and to understand the characteristics, terminology, and conventions of SBS. The SBS Alphabetic Index contains many terms not included in the SBS Tabular List, and clinical classification requires that the Alphabetic Index, the Tabular List, and the *Australian and Saudi Coding Standards* be all consulted before a code is assigned.

There are several steps in classifying interventions, and the following is a simple guide intended to assist the occasional user of SBS.

1. Identify the clinical concept to be classified and refer to the appropriate section of the Alphabetic Index.

Note: Avoid indiscriminate coding of irrelevant information, such as operative approach or procedural components.

2. Locate the lead term. For interventions, this is usually a noun identifying the type of intervention performed. However, some interventions expressed as adjectives or eponyms are included in the Alphabetic Index as lead terms.

3. Read and be guided by any Instructional note(s) that appear under the lead term.

4. Read any terms enclosed in parentheses after the lead term (these nonessential modifiers do not affect the code), as well as any terms indented under the lead term (these essential modifiers may affect the code), until the clinical concept has been accounted for.

5. Follow carefully any cross-references (see and see also) found in the Alphabetic Index.

6. Refer to the Tabular List to verify the suitability of the selected code. In the SBS Alphabetic Index, a code with five digits and a block number in parentheses (e.g., 92514 [1910]), requires the addition of a further four digits located in the Tabular List at the appropriate block.

7. Be guided by any Inclusion terms and Instructional notes under the selected code or under the chapter, block, or category heading.

8. Refer to both standards for interventions in the Australian Coding Standards, and the SBS Coding Standards as indicated by the (▽) ACS symbol in the Tabular List and (■) for SBS Coding Standards

9. Assign the code.

NON-INVASIVE, COGNITIVE AND OTHER INTERVENTIONS, NOT ELSEWHERE CLASSIFIED (BLOCKS 1820 - 1923)

This chapter is for diagnostic, therapeutic or administrative/clinical/client support and other interventions not elsewhere classified including: Cognitive interventions – interventions that require cognitive skills such as evaluation, education or counselling (eg dietary education, nutritional assessment, crisis intervention, bereavement counselling). Noninvasive interventions – therapeutic or diagnostic interventions without disruption of an epithelial lining or entry into a body part or cavity (eg lithotripsy, hyperbaric oxygenation, manipulation of a fracture, exercise therapy). The term 'Client' when used throughout this chapter, may refer to a patient, family member or significant other. 'Client' has generally been used in the singular form but may refer to an individual client or client group. Excludes: noninvasive diagnostic imaging interventions (See Chapter 20 imaging services)

DIAGNOSTIC INTERVENTIONS

Note: Assessment involves the gathering, evaluation and recording of information relative to the client's problem, functional status or situation through the use of cognitive skills and simple measurements (eg observation, history taking, anthropometry) Performed for the purpose of diagnosis, screening, monitoring, follow up, review, case management or discharge planning.

Includes: consultation with other service provider development of treatment plans or programmes ordering of diagnostic tests prescription of medications or assistive/adaptive equipment referral to another service provider use of aids or devices

• Psychological therapies include a structured interaction between a mental health client and a qualified mental health professional(s) using a recognised psychological method, for example, cognitive behavioural

techniques, family therapy or psychoeducation counselling. psychological interventions are designed to alleviate psychological distress or emotional disturbance, change maladaptive behaviour and foster mental health.

- Cognitive and/or behavioural therapies are psychotherapeutic interventions that aim to teach the client(s) how to identify any unhealthy, negative and/or maladaptive patterns of thinking (cognitive) and behaviour (behavioural) in order to evaluate and then modify them with appropriate and adaptive alternatives. This type of intervention can be performed individually, with a group, or alone (through self-help instruction), and is characterised by homework assignments to identify, evaluate and modify maladaptive thoughts and behaviours as they arise in everyday situations. This intervention is predicated on the assumption that mental illness originates internally from distorted thought processes or manifests from learned patterns of maladaptive behaviour rather than from external social or situational influences.

96100-00-00 Insight oriented therapy

Insight oriented therapy is a group of psychotherapies whose theoretical models see symptoms as arising from unconscious psychological structures, process or conflicts. These models typically focus on stages or processes of early psychological development, and the way in which this development may be disrupted by factors in family or parental relationships, including trauma. interventions used typically include a focus on the therapeutic relationship as an object of study and discussion, and identification of repeated patterns of thought, affect and behaviour within the therapeutic relationship and elsewhere in a person's life. These therapies may aim to produce change through greater conscious understanding of these patterns and processes, although conscious 'insight' is not seen as essential in all such therapies.

96177-00-00 Interpersonal psychotherapy [IPT]

Interpersonal psychotherapy is a brief, structured approach that addresses one or more problem area(s) in a client's interpersonal functioning. The underlying assumption is that mental health problems and interpersonal problems are interrelated. The therapy focuses on the client's current social context and social functioning, and does not attempt to see current situations as a function of internal conflict. The aim of interpersonal psychotherapy is to identify and resolve interpersonal difficulties, issues and problems, for example interpersonal deficits, grief, disputes and role transitions. Interpersonal psychotherapy explores a client's perceptions and expectations of relationships, and aims to improve interpersonal skills and communication.

- Insight oriented therapy (96100-00-00 [1873])

96183-00-00 Narrative therapy ☺

In narrative therapy, problems are described as stories. How a client thinks about important stories can restrict them from overcoming their present difficulties. The focus in narrative therapy is to understand the stories or themes that have shaped a client's life, and how these stories can be written and re-written. The change process involves assisting a client to identify unique outcomes and create more preferred stories

about their problems. By reframing or re-telling a story, an altered relationship with the problem can be developed. To assist with reframing and re-telling a story, a major emphasis is on identifying a client's strengths, including the skills, beliefs and abilities they already possess.

- Key stages of narrative therapy may include:
 - defining the problem
 - mapping the influence of the problem
 - evaluating and justifying the effects of the problem
 - identifying unique outcomes
 - re-storying.
- Narrative therapy is of particular value to specific cultures (for example, Aboriginal and Torres Strait Islander people), where story-telling is a central part of their culture.

96185-00-00 Supportive psychotherapy, not elsewhere classified

Supportive psychotherapy is a form of psychotherapy whose focus is on short-term improvement in distress or function through identifying a person's usual strengths and coping mechanisms and assisting the person to mobilise or strengthen those mechanisms in the face of, or following, significant stressors. Strengths and coping mechanisms may be viewed in very different theoretical frameworks (eg ego-psychology, cognitive,

social/systems). These therapies typically have an active stance, with a focus on more immediate issues.

- Skills training is characterised by a formal rehabilitative process that involves a schedule of instruction, active supervised practice by the client and evaluation of progress. It may be applied to a variety of functional areas ('skills') including physical and psychological skills. examples include communication, socialisation and vocational skills, and self-care skills such as dressing and personal hygiene behaviours. The training may be aimed at improving the skills of the client, their carer and other treating health professionals.
- Skills training attempts to build/refine functional skill deficits. In this way, skills training can be contrasted with cognitive and/or behavioural therapy, which attempts to modify a mental health client's thoughts and/or behaviours that are perceived as negative or maladjusted, but are not necessarily related to a need to develop new or refine existing functional skills

Play/leisure/recreation therapy is a type of therapy that aims to decrease behavioural and emotional difficulties that interfere with the client's normal functioning. The treating health professional uses the client's fantasies and the symbolic meanings of the client's play as a medium for understanding and communicating with the client. Play therapy allows the client to express themselves through play and is aimed at improving:

KSA SERVICE CODES (BLOCKS 8004 - 8012)

Follow up codes are used to describe ongoing surveillance, following the completion of treatment for a disease, condition, or injury, suggesting that the disease has been completely treated and is no longer present. On the other hand, repeat consultation visits cover circumstances where the patient requires continued care during the healing or recovery phase, or for the long-term progression of the disease, after the initial treatment has been performed. care should also be taken to identify the clinician type, while assigning the most appropriate code.

CONSULTATIONS

Note: Medical counselling and treatment can be provided by general Practitioner, specialist, Consultant, psychotherapy and emergency. care should be taken to the type of physician providing the medical counselling and treatment, to assign the most appropriate code.
